This sequence represents the cDNA sequence cloned into the E. coli cassette vector pMON2317 to generate vector pMON22652. The cDNA encodes the antifungal polypeptide AlyAFP, isolated from plants of the genus Alyssum. The AlyAFP polypeptide can be used to control phytopathogenic fungi, whilst the coding DNA can be used to produce transgenic plants that express the polypeptide making them resistant to the phytopathogenic fungi
                                                                                                                                                                                                                                                                                                                                                                                                       168

                                                                                                                                    This sequence encodes the mature protein of an antifungal polypeptide (AlyAFP) isolated from plants of the genus Alyssum. The sequence was PCR amplified using primers AAT94583-194584, and the resultant 264 bp fragment was cloned as a BamHI fragment into the expression vector pMON2311 to generate plasmid pMON22652. The AlyAFP sequence in this plasmid is placed under control of an E355 promoter and the malze HSP70 intron I sequence. The protein can be used to control phytopathogenic fungi, whilst the DNA can be used to produce transgenic plants that express the protein making them resistant to the phytopathogenic fungi

                                                                                                                                                                                                                                                                                                                                                                                        This sequence represents the cDNA sequence which encodes the antifungal polypeptide AlyAFP, isolated from plants of the genus Alyssum. The AlyAFP polypeptide can be used to control phytopathogenic fungi, whilst the coding DNA can be used to produce transgenic plants that express the polypeptide making them resistant to the phytopathogenic fungi

                                                                                                                                                                                                                                     This sequence represents the cDNA sequence encoding the antifungal polypeptide AlyAFP, from plants of the genus Alyssum. The sequence represents a composite of the sequences isolated by 5' and 3' RACE (Rapic Amplification of cDNA Ends) methods (see AAT94577 and AAT94580). The AlyAFP polypeptide can be used to control phytopathogenic fungi, whilst the coding DNA can be used to produce transgenic plants that express the polypeptide making them resistant to the phytopathogenic fungi

                                                              Novel protein from Brassica campestris, useful as antimicrobial against plant pathogenic filamentous fungi or pathogenic bacteria, especially for treating e.g. rice white leaf blight and sheath blight disease.
                                                                                                                                          The invention comprises the amino acid and coding sequences of antimicrobial (defensin) proteins from Brassica. The DNA and protein sequences of the invention are useful for producing transformed plants with composite disease resistance, especially resistant to diseases caused by pathogenic bacteria, such as: rice white leaf blight, brownstripe disease, glume blight, and seedling damping-off disease. As well as diseases, glume blight, and seedling damping-off disease. As well sed disease, and leaf blight. The present DNA sequence encodes a Brassica defensin protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  21 ArgAsnGlnCysArgAsnLeuGluArgAlaGluHisGlySerCysAsnTyrValPhePro

This cDNA represents the sequence of Rs-AFPI from Raphanus sativus. PCR primer AAQ38640 was used together with AAQ38641 to generate a probe for primer AAQ38640 was used together with AAQ38641 to generate a probe for screening a Raphanus sativus seed cDNA library. This primer corresponds to amino acids 2 to 7 of Rs-AFPI and has a sense orientation. The 144bp coduct was partially re-amplified using AAQ38642 and AAQ38641 to give a class product, which was further reamplified with the same primers and class product. This was used to screen a lambda ZAPII cDNA library by in situ product. This was used to screen a lambda ZAPII cDNA library by in situ conflictional screening rounds with the same probe. Inserts were excised in vivo into the pBluescript phagemid form with the aid of helper phage to two additional screening rounds with the same probe. Inserts were excised in their size compared by agarose gel electrophoresis. Four clones had their size of approx. 400bp the others between 250-300bp. The inserts of the 4 largest clones were then sequenced and found to differ only in the length of their s' and 3' UTR's. The longest sequence is given here.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Antimicrobial; Rs-AFP1; symbiosis; disease-resistance; fungus-resistance; Clavibacter xyli subsp. cynodontis; Cxc; crop improvement; endophyte; ss.

                                                                                                                                                                                                                 plant-derived antimicrobial proteins are expressed in endosymbiotic clavibacter xyli subsp. cynodontis (Cxc). Plants or seeds treated with recombinant Cxc are protected against fungal disease. A suitable antimicrobial protein is Rs-AFPl from R. sativus. The full-length cDNA sequence of Rs-AFPl is given in AAQ70128. (Updated on 25-MAR-2003 to

```
Antifungal peptide derived from radish antifungal protein 2 - and related DNA, useful for producing plants with increased fungal resistance and as therapeutic or preservative agent.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              This cDNA sequence encodes an Rhapanus sativus (radish) antifungal protein (Rs-AFP1). Analogues of the homologous protein, Rs-AFP2 (AAM19281), have also been produced (see AAM19282-92, AAM1928-94, AAM19281). Have also been produced (see AAM19282-92, AAM1928-94, AAM1930-104, AAM1930-104, AAM1930-104, AAM1930-104, AAM1930-104, AAM1930-104, AAM1930-104, AAM1930-104, AAM1930-104, AAM1930-104, AAM1930-104, AAM1930-104, AAM1930-104, AAM1930-104, AAM1930-104, AAM1930-104, AAM1930-104, AAM1930-104, AAM1930-104, AAM1930-104, AAM1930-104, AAM1930-104, AAM1930-104, AAM1930-104, AAM1930-104, AAM1930-104, AAM1930-104, AAM1930-104, AAM1930-104, AAM1930-104, AAM1930-104, AAM1930-104, AAM1930-104, AAM1930-104, AAM1930-104, AAM1930-104, AAM1930-104, AAM1930-104, AAM1930-104, AAM1930-104, AAM1930-104, AAM1930-104, AAM1930-104, AAM1930-104, AAM1930-104, AAM1930-104, AAM1930-104, AAM1930-104, AAM1930-104, AAM1930-104, AAM1930-104, AAM1930-104, AAM1930-104, AAM1930-104, AAM1930-104, AAM1930-104, AAM1930-104, AAM1930-104, AAM1930-104, AAM1930-104, AAM1930-104, AAM1930-104, AAM1930-104, AAM1930-104, AAM1930-104, AAM1930-104, AAM1930-104, AAM1930-104, AAM1930-104, AAM1930-104, AAM1930-104, AAM1930-104, AAM1930-104, AAM1930-104, AAM1930-104, AAM1930-104, AAM1930-104, AAM1930-104, AAM1930-104, AAM1930-104, AAM1930-104, AAM1930-104, AAM1930-104, AAM1930-104, AAM1930-104, AAM1930-104, AAM1930-104, AAM1930-104, AAM1930-104, AAM1930-104, AAM1930-104, AAM1930-104, AAM1930-104, AAM1930-104, AAM1930-104, AAM1930-104, AAM1930-104, AAM1930-104, AAM1930-104, AAM1930-104, AAM1930-104, AAM1930-104, AAM19300-104, AAM19300-104, AAM19300-104, AAM19300-104, AAM19300-104, AAM19300-104, AAM19300-104, AAM19300-104, AAM19300-104, AAM19300-104, AAM19300-104, AAM19300-104, AAM19300-104, AAM19300-104, AAM19300-104, AAM19300-104, AAM19300-104, AAM19300-104, AAM19300-104, AAM19300-104, AAM19300-104, AAM19300-104, AAM19300-104, AAM19300-104, AAM19300-104, AAM19300-104, AAM19300-104, AAM19300-104, AAM19300-104, AAM19300-104, AAM19300-104, AAM19300-104, AAM19300-1

This cDNA clone codes for the preprotein for radish antifungal protein I (Rs-AFP1) (AAW19617). Novel antifungal proteins are based on Rs-AFP1, Rs-AFP2 (see AAW19616), Rs-AFP3 and Rs-AFP4, especially those in which Gly9 is repaced by Arg, Val39 by Arg, Gly9 by Arg, Glu5 by Met and/or Gly6 by Met. Mutants (see AAW26371-90) of Rs-AFP2 are specifically claimed. The mutants show improved salt tolerant antifungal activity, particularly
                                                                                                                                                                                                                                                                                                                                                                                                                                                       New active mutants of radish antifungal protein 2 - used to gener fungus-resistant plants or as therapeutic or preservative agents.
                                                                      Rs-AFP1; radish antifungal protein 1; fungicide; salt tolerance; preservative; transgenic plant; crop protection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence 414 BP; 128 A; 74 C; 80 G; 132 T; 0 U; 0 Other;

Novel protein from Brassica campestris, useful as antimicrobial against plant pathogenic filamentous fungi or pathogenic bacteria, especially for treating e.g. rice white leaf blight and sheath blight disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention comprises the amino acid and coding sequences of antimicrobial (defensin) proteins from Brassica. The DNA and protein sequences of the invention are useful for producing transformed plants with composite disease resistance, especially resistant to diseases caused by pathogenic bacteria, such as: rice white leaf blight, brownstripe disease, glume blight, and seedling damping-off disease. As well as diseases caused by filamentous fungi, such as: rice blight, sheath blight disease, and leaf blight. The present DNA sequence encodes a Brassica defensin protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       21 ArgAsnGlnCysArgAsnLeuGluArgAlaGluHisGlySerCysAsnTyrValPhePro

```
Protecting plants against pathogens by inducing defensin genes - by stimulating ethylene or jasmonate pathways, also new promoter of defensin gene from Arabidopsis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        This sequence encodes the Arabidopsis PDF1.1 gene which is used in a novel method for the protection of plants against pathogens which involves inducing expression of a plant defensin gene by stimulating the jasmonate and/or ethylene pathways. The method is used to induce protection against necrotrophic pathogens, specifically fungi and does not require cytotoxic or potentially harmful chemicals
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          176 AAGAATCAGTGCATTAACCTTGAGAAAGCACGACATGGATCTTGCAACTATGTCTTCCCA

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention relates to a method (M1) for identifying genes involved in plant resistance or response to pathogenic infection. M1 comprises identifying a gene whose expression is significantly altered in the incompatible interaction of plant gene expression relative to expression of the gene in an uninfected plant, in a mutant plant that does not express a gene associated with response to pathogenic infection, or in a corresponding incompatible or compatible interaction. (M1) is useful for conferring resistance to resistance to tolerance to a plant to bacterial, fungal or viral infection. The present sequence was used to

Biocidal proteins isolated from seeds of plants - e.g. brassica or dahlia, useful for increasing plants' resistance to fungal and bacterial

Terras FRG;

Example 21; Fig 35; 110pp; English.

This cDNA represents the sequence of Rs-AFP2 from Raphanus sativus. PCR primer AAQ38640 was used together with AAQ38641 to generate a probe for primer AAQ38640 was used together with AAQ38641 to generate a probe for screening a Raphanus sativus seed cDNA library. This primer corresponds to amino acids 2 to 7 of Rs-AFP1 and has sense orientation. The 144bp product was partially re-amplified using AAQ38642 and AAQ38641 to give a clagoxigenin-11-dUTP instead of dTTP to give a digoxigenin-11-dUTP instead of dTTP to give a digoxigenin labeled PCR product. This was used to screen a lambda ZAPII cDNA library by in situ product. This was used to screen a lambda ZAPII cDNA library by in situ plaque hybridisation. Positive plaques were purified and subjected to two plaque hybridisation promise with the same probe. Inserts were excised in vivo into the pBluescript phagemid form with the aid of helper phage crimers is zec compared by agazose gel electrophoresis. Four clones had contained to their states of approx. 400bp the orthers between 250-300b; The inserts of the largest clones were then sequenced and found to differ only in the langest sequence was identified as Rs-AFP1 so the Rs-AFP2 was seen to differ by only 2 amino acids from Rs-AFP1, so the Rs-AFP2 was seen to differ by only 2 amino acids from Rs-AFP1, so the Rs-AFP2 was sasisted site directed mutagenesis. (Updated 25-MAR-2003 to correct PN field.)

Plant-derived antimicrobial proteins are expressed in endosymbiotic clavibacter xyli subsp. cynodontis (Cxc). Plants or seeds treated with recombinant Cxc are protected against fungal disease. A suitable antimicrobial protein is Rs-AFPI from R. sativus. The full-length cDNA sequence of PCR assisted site-directed mutagenesis of Rs-AFP2 is given in AAQ70130 and the deduced amino acid sequence in AAR57327. (Updated on 25-

Patent No. 663230
GENERAL INFORMATION:
APPLICANT: Liang, Jihong
APPLICANT: Shah, Dilip M.
APPLICANT: Rescherger, Cindy A.
TILLE OF INVENTION: Antifungal Polypeptide ALYAFP from Alyssum and Methods for Control
TILLE OF INVENTION: Plant Pathogenic Fungi
FILE REFERENCE: 38-21 (10700) C
CURRENT APPLICANTION NUMBER: US/09/829,381D
CURRENT FILING DATE: 2001-04-09
PRIOR FILING DATE: 1998-06-24
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            1 ArgLeuCysGluArgProSerGlyThrTrpSerGlyValCysGlyAsnAsnAsnAlaCys

                                                                                                                                                                                                                                                                                                                                                  Sequence 9, Application US/09829381D

Patent No. 6653280

GENERAL INFORMATION:
APPLICANT: Liang, Jihong
APPLICANT: Shah, Dilip M.
APPLICANT: Shah, Dilip M.
APPLICANT: Rosenberger, Cindy A.
TITLE OF INVENTION: Plant Pathogenic Fungi
TITLE OF INVENTION: Plant Pathogenic Fungi
TITLE REFERENCE: 38-21 (10700) C
CURRENT FILING DATE: 2001-04-09
PRIOR APPLICATION NUMBER: 09/103,489
PRIOR PILING DATE: 1998-06-24
NUMBER OF SEQ ID NOS: 20
SOFTWARE: Patentin version 3.1
SEQ ID NO 9
LENGTH: 500
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      218
